Solution to Guess Who I Am

Aulinda Wei

Here are some general strategies that are useful to tackle these sorts of puzzles:

1. Start with rows or columns that have very large numbers (like 15 or 16) — these cover most of the row and are easiest to place.
2. Fill the guaranteed middle section first. For a 17-wide grid with clue 16, all but one cell are filled, so only one edge cell stays blank.
3. Notice the puzzle's left-right symmetry and use it to deduce mirrored fills.
4. Use intersections: where filled columns overlap filled rows, confirm those cells.
5. Continue eliminating impossible blanks until the entire shape is revealed.
