

Utilities

Nathan Kuo

Three cities are supplied water, gas, and electricity from three separate plants. Pipes need to be drawn from each supplier to each city. The lines cannot cross more than once. These puzzles draw inspiration from the Three Utilities Puzzle.

Puzzle 1:

A junction exists between the cities and utility plants. You've been given special pipes that can bend in any way, so curved paths are possible.

Puzzle 2:

City A needs a double supply of water, while City B doesn't need any water. Unlike the first puzzle, you only have pipes that are either straight, 90 degrees, or 45 degrees.
